Prepared Statement

Of

The Honorable Gilbert Cisneros
Under Secretary of Defense for Personnel & Readiness

Ms. Virginia Penrod
Acting Assistant Secretary of Defense for Manpower & Reserve Affairs

Dr. David Smith
Acting Principal Deputy Assistant Secretary of Defense for Health Affairs

Ms. Beth Foster
Executive Director, Office of Force Resiliency

Regarding
Fiscal Year 2023 Defense Personnel Posture

Before the

Senate Armed Services Subcommittee on Personnel
April 27, 2022
Chairwoman Gillibrand, Ranking Member Tillis, and members of the Personnel Subcommittee, thank you for the opportunity to testify before you, along with the other leaders of the Office of the Under Secretary of Defense for Personnel & Readiness (OUSD(P&R)), to discuss the Department of Defense’s greatest strength – our people. We are proud to represent the 2.3 million Active and Reserve Component Service members and over 900 thousand DoD civilians who defend our nation every day, not to mention the families who serve alongside them.

In Secretary Austin’s earliest Message to the Force and actions related to addressing sexual assault, he made clear that taking care of people is not only the right thing to do, but it is imperative for our national security. While past Administrations and DoD leaders have acknowledged the importance of the workforce, I believe President Biden, Secretary Austin, and Deputy Secretary Hicks have truly shown both in their words and actions that DoD will invest in our greatest strategic advantage, our people. This commitment is evident throughout the FY23 Defense Budget.

To ensure our national security in both the near and long term, Secretary Austin identified three overarching ways in which we will carry out the newly released 2022 National Defense Strategy (NSD) priorities – integrated deterrence, campaigning, and building enduring advantage. While these three specific initiatives have different focus and goals, essential to each is having the right people today and in the future to carry out our strategic imperatives. To quote Secretary Austin, “[s]trategies mean little without the right people to execute them.” Therefore, specifically under the umbrella of building enduring advantage, the Department, with P&R at the forefront, will focus on investing and building the best future force, strengthening readiness through resilience, enhancing accountable leadership, and supporting our Service members and their families.

RECRUITING THE RIGHT TALENT

A critical component to building enduring advantage is maintaining the flow of highly qualified recruits through the accession pipeline. We must invest in human capital initiatives to compete for, hire, develop, and retain highly skilled experts in the ever-changing national talent landscape. However, more so than in the recent past, the Department is in fierce competition for skilled, relevant and innovative talent to cultivate a technologically dominant force that is strategically ready, globally relevant and flexibly sustainable. Given the tight labor market exacerbated by the residual effects of the COVID-19 pandemic and general military-civilian disconnect, the Services are facing a challenging recruiting environment. The size and quality of the youth market has changed very little in ten years. Only 23% of today’s youth are eligible for military service without a waiver, and only 2% are eligible, high-quality, and likely to serve. Youth propensity has declined over the last several years, from 13% in 2018 to 9% in 2021. This decline represents approximately 1 million fewer youth propensed for military service. Female
propensity also declined during the same time period, from 10% in 2018 to 5% in 2021. It is likely that recruiting challenges will be present for the foreseeable future.

To address some of these challenges, the Services modified recruiting and basic training activities, and capitalized on innovative initiatives to leverage digital and virtual recruiting tools and engage prospective recruits. Working with the Services, P&R is focused on overcoming the ever-widening gap between the American people and the military by bolstering the strategic tools needed to expand outreach efforts to reach a diverse pool of youth across the nation. We are ensuring that the Services have the necessary authorities and tools to recruit the most qualified cohort of Soldiers, Sailors, Airmen, Marines and Guardians reflective of our nation’s tremendous talents and diversity. Additionally, Department leadership has addressed gender equity across the force from tackling barriers to childcare, heightened awareness, response, and prosecution of sexual assault/sexual harassment, and improvements to pregnancy and leave policies. The only way for us to compete, deter, and win in today’s complex global environment is to find the most innovative and open-minded cadre of recruits from every part of this great nation. We are marketing to those who have not traditionally considered military service as a career option and reaching out to influencers who may help or support a young person’s decision to join the military. We are also leveraging other outreach programs as recruiters’ access to high schools have become more difficult over the years. The FY23 Defense Budget reflects the Services’ required resources to support these primary recruiting levers (recruiters, marketing, and bonuses) in order to help offset the difficult recruiting environment.

As you will hear directly from the Services on their outlook to meet their current fiscal year recruiting goals for Active and Reserve components, we believe the FY23 Defense Budget, including the 4.6% military pay raise will help address some of the upcoming challenges. As you heard in testimony last week, ensuring we have the right number of people, with the right skills and talent, has the highest attention of Department’s senior leadership. We are committed to not only meeting our military recruiting targets, but also finding the most qualified and mission ready talent this great Nation has to offer.

**DoD Civilian Workforce**

As critical enablers of our warfighters, DoD civilians perform functions in intelligence, research and development, equipment maintenance, healthcare, family support, base operating services, and other activities that directly support the military forces and readiness. The DoD civilian workforce possesses capabilities, expertise, and skills that directly impact DoD’s worldwide military operational capabilities. The Department continuously strives to improve its ability to recruit, retain, develop, and reward the civilian workforce to support the warfighter and encourage innovative best practices throughout the armed forces.

One of the Department’s biggest civilian workforce challenges is the competition for talent in innovation and cutting-edge fields that are in high demand across the public and private sectors, and critical to the support of DoD’s national defense mission. Therefore, the Department continues to utilize a variety of human capital solutions to better compete and
overcome market demands for these critical skills, including increased pay and other incentives. To that end, we thank Congress for providing streamlined direct hiring authority for critical scientific, technology, engineering, and mathematics (STEM), cyber, healthcare, and other positions. This is a critical tool to compete against the private sector by reducing our time-to-hire and allowing us to target the talent needed in these key areas.

The Department is exploring other options to narrow the talent gap between defense strategy and emerging technologies, to include resourcing the innovation workforce by recruiting, up- or reskilling, and retaining tech-savvy, data-skilled civilian talent, through public-private partnerships, working with universities, and other opportunities. We are also proactively growing and developing the pipeline of future talent and have seen great success in the use of a variety of internship, scholarship, and fellowship programs managed both at the enterprise and component levels, such as the Science, Mathematics, and Research for Transformation (SMART) program, the John S. McCain Strategic Defense Fellows Program, and the National Security Education Boren Scholarship and Fellowship programs. We must ensure that strategic workforce planning and human capital management activities support the Department’s need to shape a professional, agile, and ready civilian workforce.

RETAINING THE RIGHT TALENT

Not only do we have to recruit the right talent, but we need to retain and invest in our people to meet mission-critical needs now, as well as emerging mission requirements of the future. However, similar to recruiting, Services are also facing some retention challenges in certain high-demand, low-density fields due to a strong economy and high operational tempo. To address these specific skills challenges, we continue to use a mix of tailored retention bonuses and non-monetary incentives to enhance retention and fill military occupational specialty gaps. And thanks to Congress, we have recent legislative authorities that allow us to go beyond the traditional up or out structure, as well as allowing lateral entry of individuals with certain specialized skills and career intermission programs for Service members who need to step away from Active service to pursue educational or occupational opportunities or to address personal priorities. These incentives allow DoD to compete with the private sector for high-demand and critical talent. Another key retention and people focus area with the highest attention of the administration, is ensuring appropriate compensation for our service members and strengthening the economic security of those who serve and their families.

**Compensation and Economic Security**

However, retention of quality talent is bolstered by more than bonuses and incentives. Ensuring that we are appropriately compensating our workforce and increasing the overall economic security of Service members and military families is critical to mission readiness. While we believe that the current military compensation package is fair and compares favorably with the private sector, in order to remain competitive, we must keep pace with private-sector
wage growth and inflation. The 4.6% across-the-board basic pay raise included in the FY23 Defense Budget request does just that. With low unemployment and increasing private-sector wages, we have to remain vigilant to ensure military compensation remains attractive so we can recruit and retain the force we need.

And while the data shows that Service members are paid above most of their civilian counterparts, we also know that individual circumstances vary and there are those who are struggling to make ends to meet. To that end, Secretary Austin issued a memorandum in November 2021 announcing Department-wide efforts to strengthen economic security in the force. The Department recognizes some Service members and families are experiencing economic challenges related to the COVID-19 pandemic and increasingly competitive housing markets. To ease the financial burden of rising housing costs, we authorized temporary increases in Basic Allowance for Housing (BAH) rates for 56 Military Housing Areas. BAH is a fundamental part of the military pay package and BAH rates must be based on the costs of adequate housing for civilians with comparable income to members in the same area. The temporary BAH rate increases were available to Service members in areas where the COVID-19 pandemic had a significant impact on rental housing costs until the updated 2022 BAH rates were put into effect.

We are also grateful to Congress for recent legislation included in the FY22 NDAA authorizing the Basic Needs Allowance (BNA), which supplements a Service member's compensation up to 130% of federal poverty guidelines, for those whose household income falls below this threshold. This primarily affects junior Service members with large families. The Department is currently in the process of implementing this incentive and the first BNA payments are scheduled to go out in January 2023, as authorized by Congress.

While additional data collection and analyses are underway to understand the full scope of the issue, particularly around food insecurity, the Department is implementing solutions to aid those in need. With the understanding that a military family's economic security is critical not only a Service member’s well-being, but to command climate, mission readiness, and retention, the Military Departments and Service leadership are educating leaders at all levels of command to identify and support Service members experiencing economic insecurity, and direct them, and their spouses, to military and community resources. Department support in this area includes, among other things: financial assessments and counseling; improved access to and increased assistance with childcare; education subsidies and employment support for spouses; and increased access to nutritious and affordable food options. All these efforts are designed to reduce stigma, increase financial help seeking behaviors, and increase stability for Service members and families. The Department created a web-based Economic Security toolkit for commanders and service providers on Military OneSource to provide military leaders with existing resources and flexibilities to address housing availability, financial well-being, and food security. As part of the campaign rollout, the toolkit was included in a SECDEF memorandum on Strengthening the Economic Security of the Force on November 17, 2021; included in a
Defense.gov article; provided in a video developed by the Defense Visual Information Distribution Service; and featured continually on the Military OneSource website, social media and eNewsletters.

To address many of these issues, we will be working with the White House to initiate the 14th Quadrennial Review of Military Compensation (QRMC) later this year. This next iteration of the QRMC will serve as an opportunity to thoroughly review and assess our military compensation system to strengthen our members’ economic security, and better attract and retain Service members and their families.

Likewise, our investments in the civilian workforce focus on the importance of federal employees as an element of the Department’s Total Force. The 4.6% requested pay raise is critical to compete for, hire, develop, and retain highly skilled experts. The requested increase allows the Department to achieve and maintain technical and intellectual superiority, and remain competitive with private industry in attracting and sustaining a talented workforce.

In conjunction with the requested federal pay increase, the Office of Personnel Management (OPM) issued a memorandum on January 21, 2022 to Executive departments and agencies, “Achieving a $15 Per Hour Minimum Pay Rate for Federal Employees.” This change will impact over 67,000 federal employees, 57,500 of whom work at DoD. The affected DoD employees, including many military spouses, are in Nonappropriated Fund activities, providing valuable contributions as sales clerks, child care staff, food service workers, laborers, and in many other occupations serving our DoD communities. The minimum wage increase will also have a positive impact on DoD Morale, Welfare, and Recreation programs, allowing installations to attract, hire, and retain a high quality workforce and positively impact military families. Similarly, approximately 5,000 child and youth program employees have received a pay increase. The Department is exploring whether higher wages for the employees who provide these important services will attract more caregivers and, as a result, increase capacity for care.

**Child Care Access and Expansion**

Child care is a workforce enabler and a critical component of the readiness, efficiency, and retention of the Total Force. Our experience with COVID-19 also highlighted the importance of child care in contributing to the well-being and economic security of our families. Staffing shortfalls decreased the number of children cared for in installation and community-based programs. Affordable, quality child care continues to be a challenge facing many DoD families and the nation writ large. Child care is among the lowest paid occupations in the nation, and child care professionals with a similar education earn less than those working in different fields, which contributes to the persistent challenge of recruiting and retaining the workforce needed to meet the child care needs of our families.

To best support the child care needs of our Service members and civilian workforce, the Department will be investing in construction of on-base child development centers; expanding fee assistance programs; extending fee assistance programs to lower income DoD civilian
families; and supporting public-private partnerships to increase child care capacity in high-demand, low-capacity areas. In October 2021, the Department adjusted the fee assistance amounts for which families would qualify, and implemented the $1,500 monthly per child provider rate cap to match the traditional community-based fee assistance program. This adjustment increased the amount of fee assistance for which families are eligible.

The FY23 Defense Budget included funding to continue a pilot program providing Service members financial assistance to offset the cost of in-home child care, such as care provided by nannies. It also expands The Military Child Care in Your Neighborhood PLUS program which utilizes the States Quality Rating and Improvement Systems as an indicator of provider quality, in lieu of national accreditation, broadening the pool of providers eligible to receive fee assistance on behalf of military families.

P&R continues to work in collaboration with the Military Departments on the development and implementation of initiatives aimed at improving child care availability, addressing child care staffing challenges, exploring public-private partnerships, identifying construction requirements, and expanding our child care community-based fee assistance program. Addressing child care access for all Service members, as well as certain DoD civilians, is another critical element to building enduring advantage, and the right thing to do to take care of our people.

Military Spouse Employment

We are especially cognizant of the sacrifice military spouses make in their careers or education as they move from one duty station to the next with their Service member and other dependents. Therefore, DoD remains committed to providing military spouses with information, resources, and tools to assist in achieving their educational and employment goals. The Department’s Spouse Education and Career Opportunities (SECO) program augments the Service’s installation based programming through high quality virtual support. The Department continues to increase employment opportunities through the broadening of the Military Spouse Employment Partnership (MSEP), with a focus on critical employment sectors such as information technology, education, and small businesses. Broadening the MSEP program to include small businesses in military impacted communities will provide more employment opportunities for military spouses. As outlined in the “Strengthening America’s Military Families” report, Federal agencies have committed to employing military spouses in partnership with the DoD. 16 Federal employers have joined MSEP, increasing employment opportunities for military spouses in the Federal sector. Military spouses can find employment opportunities from more than 540 MSEP employer partners via MSEP jobs portal., MSEP is made up of more than 500 companies, federal agencies, and non-profit organizations that are committed to recruit, hire, promote, and retain military spouses. To date, MSEP employer partners have hired more than 220,000 spouses.

In addition, to assist military spouses with starting and maintaining meaningful employment and careers, the Defense State Liaison Office works with state legislators in all 50
states to improve and enhance state laws governing occupational license portability and reciprocity. Again, Congress helped us in the FY20 NDAA, authorizing DoD to enter into a cooperative agreement with the Council of State Governments (CSG) to support professions developing inter-state compacts for licensure. To date, five professions (teaching, clinical social work, massage therapy, dentistry/dental hygiene, and cosmetology/barbering) have been provided grants of up to $1 million each and CSG has started convening advisory groups for each profession from September 2021 – January 2022, and expects all compacts to be ready by January 2023.

Understanding that military spouses are usually transitory based on their service member’s duty location we are addressing the ongoing challenge of ensuring they are aware of available resources and support to assist them. And as directed by the FY22 NDAA, we are implementing recommendations from the GAO to improve communications that engage military spouses with career assistance resources. Ensuring awareness and increasing utilization of resources across the force, from our youngest spouse to our most seasoned, is crucial to retaining our Service members and their families and ensuring family readiness.

**Commissaries**

We are aware that the current economic conditions and COVID-19 have directly impacted our Commissaries. Access to grocery products worldwide remains a top-priority of the Defense Commissary Agency (DeCA) which continues to manage amplified supply chain issues, coupled with inflationary pressures, and increased expenses due to ground transportation shortfalls and delays. Our DeCA team is working with the U.S. Transportation Command (TRANSCOM) to prioritize shipments to overseas locations, ensuring product availability for those serving in OCONUS environments and continues to work with suppliers and distributors to meet the demand.

Defense Commissaries are DoD’s first line of defense for families in need. Their primary purpose is to provide food security by offering healthy food at significant savings. The benefit enhances quality of life and readiness for military Service members, their families, retirees, Medal of Honor recipients, their authorized family members, and all veterans with a service-connected disability. Additionally, we continue to create innovative approaches to increase customer convenience and educate patrons on the value and the savings generated by using their well-deserved benefit.

**COVID-19 Efforts and Way Ahead**

Mitigating COVID-19 will continue to be a top priority for the Department. We will align our activities with the White House, and federal partners, and our activities will be informed by the best science and evidence. The Department has met the COVID-19 challenge, harnessing our resources to provide needed support across the Nation and to stressed healthcare systems; administering millions of vaccines to over 90% of our Service members and millions of
beneficiaries and workers; and procuring personal protective equipment, tests, therapeutics, and tests on behalf of the federal government.

The Department will continue to support vaccination requirements. Our Force must remain healthy and ready to defend the Nation. Vaccination against COVID-19 helps us achieve that goal, and will ensure we remain the most lethal and ready force in the world. This FY23 Defense Budget prioritizes the Department’s response to the COVID-19 pandemic, allowing us to be equipped for any future challenges COVID-19 may present, as well as other biological threats, to challenge the American people.

As our employees re-enter the workplace, we cannot expect to return to “business as usual.” Throughout the pandemic, we embraced telework and flexible schedules to achieve new efficiencies, and will continue to employ successful practices to promote a resilient and productive workforce.

RESILIENCE AND ACCOUNTABLE LEADERSHIP

In Secretary Austin’s March 4, 2021, Message to the Force, he specifically called out the need to build resilience and readiness, and ensure accountable leadership under the broader goal to “Take Care of Our People.” Much of P&R’s focus under his leadership has been addressing these for which the Department has historically fallen short. Addressing these topics is critical to reflect our values, maintain cohesive and strong units that are necessary for battlefield effectiveness, and ensure our overall military readiness and leadership on the global stage. We continue efforts to address sexual assault and sexual harassment with an unprecedented level of leadership attention and resource investment. We are also assessing all obstacles in creating a more diverse, equitable, and inclusive workforce at all ranks -- and ensuring accountable leadership that calls out behaviors that are antithetical to our values and undermine our readiness and discipline. The FY23 Defense budget and current ongoing efforts reflect these priorities.

Addressing Sexual Assault

Sexual assault is not only a threat to our readiness but completely contrary to our values. We will not compromise on this issue, as rebuilding trust with the Force requires us to get this right. Therefore, the entire Department continues to work collaboratively – across Office of the Secretary of Defense (OSD) Components, Military Departments, and the National Guard Bureau to operationalize the Secretary’s implementation guidance for recommendations from the Independent Review Commission on Sexual Assault in the Military (IRC). Sexual assault has a devastating impact not only on our military’s readiness but also individual survivors, and we remain committed to ensuring that survivors receive recovery care and are able to continue their military career. In order to bring about significant change, it is clear the Department must make significant investments both in our efforts and resources to properly and effectively address sexual assault in the military. The FY23 Defense budget does that.
Implementing the more than 80 IRC recommendations will require focused sustainment. Many recommendations (Tier 1 and Tier 2) are already ongoing or will begin in the short-term. And given the multi-pronged approach by and across every organization and installation worldwide, our plan reflects a conservative timeline to ensure we do this right and appropriately address any challenges or obstacles as we move across the tiers of recommendations. We are now developing IRC outcome metrics that will track and demonstrate progress implementing all recommendations, to include:

- Reforming military justice to put prosecution decisions for sexual assault, domestic violence, and other named offenses in the hands of trained, experienced and independent attorneys who report outside the command structure, and only to the civilian Secretaries of the Military Departments. This includes building a career track for military justice in each of the Services, to enable the development of a sustained cadre of these specialized prosecutors across the force.

- Fielding a full time, specialized prevention workforce in every Service to address risk and protective factors for sexual assault and other readiness impacting behaviors such as suicide and domestic violence.

- Revising our response workforce to provide sexual assault response coordinators and victim advocates with independence and expertise to foster recovery-oriented support and ensure victims have the resources they need, including phasing out the reliance on collateral duty/dual-hatted victim response personnel.

We believe our efforts will restore the trust and faith of our military, assist victims with recovery, and hold offenders appropriately accountable. We also want to express our appreciation to Congress for the sexual assault and sexual harassment prevention and response legislation included in the FY22 NDAA, which supported the IRC’s recommendations and provided us additional authorities to implement these historic reforms. Now we ask for your support for the FY23 Defense Budget request that will provide the necessary resources to make these historic changes to reform military justice, field the specialized prevention workforce, train and equip response personnel, and empower victims’ recovery. As stated in the report of the Independent Review Commission on Sexual Assault in the Military, “Moving the needle on sexual harassment and assault will require new investments in victim services and prevention.” Again, these efforts not only reflect our values, but they will have a direct impact on improving military readiness and ensuring the unit cohesion necessary for success on the battlefield.

On-Site Installation Evaluations (OSIEs) are another example of the unprecedented steps Secretary Austin has taken to eliminate the presence of harmful behaviors in the military, protect our people and improve readiness. OSIEs are innovative, global, and recurring activities to help leaders up and down the chain of command drive data-driven improvements to their command climates – not only to prevent sexual assault and harassment but also other harmful behaviors such as suicide. This initiative expands the Department’s renewed emphasis on the integrated
prevention of harmful behaviors. OSIEs also heighten visibility of risk and protective factors impacting our installations and improve our chances of detecting and correcting of harmful behaviors before tragic incidents occur. Finally, OSIEs allow us to detect best practices and make them common practices, as well as identify where additional interventions or resources may be needed.

The inaugural OSIEs helped to establish a process, procedures, and data analyses that can be replicated in subsequent visits. The evaluations of 20 sites are now complete, and the 2021 OSIE Report includes findings from the on-site assessment, best practices and lessons learned, as well as actions the Department should undertake to improve and enhance our environments. Based on the 2021 OSIEs’ helpful outcomes, Secretary Austin has determined that this effort will continue biennially.

**Suicide Prevention and Mental Health**

Every death by suicide is a tragedy and weighs heavily on the military community. The Department is steadfast in its commitment to suicide prevention, and the overall well-being of our Service members and their families. Suicide represents a complex interaction of psychological, biological, and environmental factors that vary among individuals. Because no two individuals are identical, our efforts seek to address a range of risk factors and enhance protective factors.

We are committed to addressing this issue, not only because it affects our missions, but more importantly because we have a moral responsibility care for people. Our public health approach focuses on reducing suicide risk for all Service members and their families by targeting the various underlying risk factors (such as relationship, financial, and mental health stressors), while also enhancing protective factors (such as social connections, coping skills, and safety in one’s environment).

We are working to enhance holistic, data-driven suicide prevention, non-clinical policy, oversight, and engagement that address prevention across populations, and also clinical suicide prevention efforts with mental/behavioral health services. This approach enables us to address suicide comprehensively through a public health approach that leverages best practices, including from the Centers for Disease Control & Prevention. Our work incorporates community-based prevention efforts involving military leaders, family, peers, spouses, and chaplains.

One major challenge is the demand for mental health services is outpacing the supply of mental health professionals nationwide. Mental health concerns, and demand for mental health care, appear to have been exacerbated by the COVID-19 pandemic. DoD undertook rapid action to sustain mental health services, and continued to deliver care in a virtual environment, establishing Health Protection Condition linked guidance to standardize mental health operations during the COVID-19 response in order to protect providers, protect patients, and maintain routine care safely. We are working to develop a staffing model, which focuses on matching
supply to demand, optimizing provider availability (supply) with the goal of treating 100% of Active Duty Service members (demand) in the Direct Care system. To those ends, the Uniformed Services University for Health Sciences currently offers three mental health related degree programs: PhD in Clinical Psychology, PhD in Medical Psychology, and Doctor of Nursing Practice (DNP) in Psychiatric Mental Health. And to mitigate further challenges in supply, we continue to rely on the civilian network, aiming to provide care within the access to care standards for appointment wait time.

Pursuant to the FY2022 NDAA, Secretary Austin directed the creation of the Suicide Prevention and Response Independent Review Committee (SPRIRC) on March 22, 2022. The SPRIRC will conduct a comprehensive review of the Department’s efforts to prevent suicide, visit multiple installations, and conduct additional information gathering to strengthen our actions. The Secretary directed the SPRIRC to seek long-term positive effects across the military. This effort supports the Department’s continued focus on prevention, including alignment with the recommendations from the Independent Review Commission on Sexual Assault.

Secretary Austin chose nine installations to ensure each Military Department is represented, and to increase our understanding of the needs of various geographies, including geographically isolated and OCONUS locations like Alaska, acknowledging recent challenges. The selection process was data-driven, and included feedback from the Services and the National Guard Bureau. Through this review, we will leverage outside experts to critically examine how we can improve our policies and programs to best support our military community. Their independent recommendations will help inform change across our force to prevent future tragedies.

The Department has the responsibility to support and protect those who defend our Country and their families, and we must do everything possible to prevent suicide in our military community. Towards this goal, we seek to encourage help-seeking behaviors, eliminate stigma, and enable access to mental health clinical services for our Service members and their families.

**Diversity, Equity, Inclusion and Accessibility**

DoD has faced challenges in achieving desired diversity across the Total Force, particularly at leadership levels. Actions taken to date have not yet translated to the changes we desire. Additional steps are in progress to make improvements. To continue to improve, DoD is working to further to understand root causes in areas where we lack diversity, have measurable desired outcome metrics, maintain appropriate data to inform and target efforts, ensure environments are inclusive of all who serve, and have a strong governance structure to oversee these efforts.

Enhancing Diversity, Equity, Inclusion and Accessibility (DEIA) across our Department maximizes our ability to recruit and retain top talent, and DoD strives to ensure DEIA underpins every aspect of our approach to talent management. To facilitate, inform, and advance agency
progress on issues relating to DEIA, we established the DoD Equity Team (DET) in April 2021. The DET addressed a broad range of issues, including the need for increased diversity within the talent pipeline; challenges pertaining to DEIA data collection, analysis, and management; and integration of diversity and inclusion curriculum into leadership development training.

Furthermore, as part of President Biden’s efforts, the Department carried multiple actions corresponding with DEIA-related executive actions from the White House. In accordance with Executive Order (EO) 13985 and EO 14035, and through the efforts of the DET, the Department evaluated external-facing programs and, in collaboration with the Domestic Policy Council, developed the DoD Equity Action Plan. DoD also looked at its internal practices for DEIA in its workforce culture, and is developing goals and objectives to advance DEIA. These accomplishments contributed to DoD’s progress in the DEIA space.

While DoD is focused on these DEIA efforts to bring about long-term changes, the Department will also work to support the individual, interpersonal, and institutional factors that promote racial, ethnic, and gender diversity and inclusion in the military and eliminating any causal factors that prevent diversity or leads to discriminatory practices. We are taking steps to ensure our Service members and DoD civilian employees have an opportunity to achieve their professional goals based on merit, remove any barriers that prevent equal opportunity, and ensure a cohesive and ready force that reflects the diversity of our Nation.

SUPPORTING THE SUCCESSFUL TRANSITION FROM MILITARY

When citizens join our All-Volunteer Force, they offer their lives for a number of years. In exchange, when they return to civilian life at the end of their commitment, they should be more competitive in the economic marketplace. This is the “social compact,” and when DoD lives up to it, through programs like tuition assistance, credentialing, and SkillBridge, American society reaps the benefits. About 200,000 Service members transition out of the military each year. The transition from military to civilian life—especially the 365-days prior to the 365-days post separation—is widely recognized as a challenging and stressful time for Service members and their families.

**Tuition Assistance/ SkillBridge/ Credentialing**

DoD’s Tuition Assistance (TA) program provides Service members with financial assistance to enhance their academic achievement (i.e., earn a degree or certificate) during their off-duty time, which in turn improves job performance, promotion potential, self-development, personal quality of life, and overall readiness. While TA is not specifically designed in support of the Service members’ transition out of the military, it also provides ancillary benefit as an effective retention tool and supports their potential career after their service.

DoD’s Credentialing, Apprenticeships (the United Services Military Apprenticeship Program – USMAP) and SkillBridge Employment Training programs exist on the spectrum of
how military training, experience, and skills relate to increased mission readiness and ultimately result in successful post active-duty careers. The demand for credentialing from Service members and industry continues to grow. Professional credentialing is an integral key of the Services’ recruiting, in-service development, promotion, retention, and transition strategies. SkillBridge allows providers to sponsor a Service member to participate in civilian training (certificate or non-traditional courses), apprenticeship, and internship programs, starting up to six months before separation.

Transition Assistance Program

Transition Assistance Program (TAP) delivery is a collaborative effort between DoD and the Military Services, Department of Labor, Department of Veterans Affairs (VA), and Small Business Administration; each with a primary area of responsibility and focus. However, the program succeeds due to a robust interagency collaboration and communications strategy that encompasses the four agencies listed above, and three additional agencies--Department of Homeland Security, Department of Education, and the U.S. Office of Personnel Management. Working together, these seven agencies and the Services provide consistent messaging and ensure collaboration and synchronization in the delivery of the program.

During TAP, all transitioning Service members complete a Military Occupational Code (MOC) crosswalk. They compare their military skills to civilian career opportunities and identify any gaps in education and training that they can then address to enhance civilian employability and marketability. Many transitioning Service members know that they want to pursue a specific course of education, a certain career field, or go into business for themselves. Others are undecided and could use more exploration and assistance in their career search. The MOC crosswalk is set up to help all transitioning service members refine their goals.

TAP also addresses transition-related risks and barriers as part of the initial counseling with a personal self-assessment administered by the Services. The self-assessment indicates potential risk and levels of support required. If an assessment indicates the need or desire for follow-on support, the Service member is connected via a warm handover to the appropriate agency or support organization for specialized assistance targeted the specific needs.

DoD-VA Collaboration

The DoD and VA relationship is stronger now than ever before, as both Departments leverage shared resources and interconnected processes to support Service members, Veterans and their families. And this past year, we renewed our shared commitment to support publishing a five-year joint strategic plan focusing on healthcare, benefits and service delivery, job training, transition, and modernized business practices.

A goal within both Departments is to enhance the transition and post-separation experience of Service members. VA and DoD have designated the 365-days prior to transition through the 365-days post transition as the critical transition period. During this period,
collaboration efforts will focus on a comprehensive, timely, and personalized approach to Service member transition.

Additionally, a common undercurrent to joint DoD-VA work is the sharing of data and analytics between Departments. Through a recently signed DoD-VA Joint Data and Analytics Strategy the path is now set for VA and DoD to optimize data, and coordinate and share analytics. This will empower both agencies to make better decisions directly impacting Service members and Veterans.

Finally, The Federal Electronic Health Record Modernization (FEHRM) office has lead the DoD, VA, and other federal agencies in deploying a single, common federal electronic health record (EHR). This EHR allows DOD, VA, and other partners effectively deliver health care and benefits to more than 28 million eligible beneficiaries by bringing a common record to patients and providers. As of March 2022, there are more than 95,000 DoD, VA, and other federal EHR users (doctors, nurses, etc.) at 66 DoD Commands, three VA sites across 41 states, two U.S. territories, and one overseas location. More than 4.5 million unique patients are currently in the federal EHR system. There is recognition that the federal EHR saves providers time and enables more standard workflows to support enhanced clinical decision-making and patient safety. The federal EHR will continue to evolve as experiences with deploying and using the federal EHR drive lessons learned, best practices and enhancements moving forward.

CONCLUSION

There is a significant milestone ahead of us – we will be celebrating 50 years of All-Volunteer Force (AVF) in 2023. When this country eliminated the draft in 1973, we could not have imagined the success story of the AVF that has created the most educated, professional and capable military force in history. The Department has learned and applied many lessons in the past 50 years. As we look forward to the next 50, it is imperative that we do not take for granted what makes our U.S. Military unparalleled and unmatched. It is the people – the Active, Reserve, National Guard, DoD Civilians, and all of their families who are willing to serve this country. And all of us here today will not forget that as we do our jobs every day.

Thank you for your continued support of our Service members and their families, we look forward to your questions.
